

Fibre Optics

Workshop facilities and services

Fibre optics workshop and capabilities

MacArtney have at our disposal a worldwide network of well-equipped fibre optics workshops with the latest fibre optic production and testing tools including optical time-domain reflectometers (OTDR) and fusion splicing equipment.

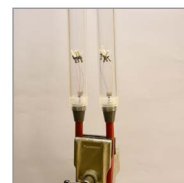

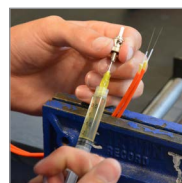

From these workshops, teams of highly trained and experienced fibre optics technicians produce and service the range of MacArtney OptoLink fibre optic connectors, penetrators and assemblies along with custom fibre solutions. If required, our technicians are also capable of servicing fibre optic connectivity products from other manufacturers.

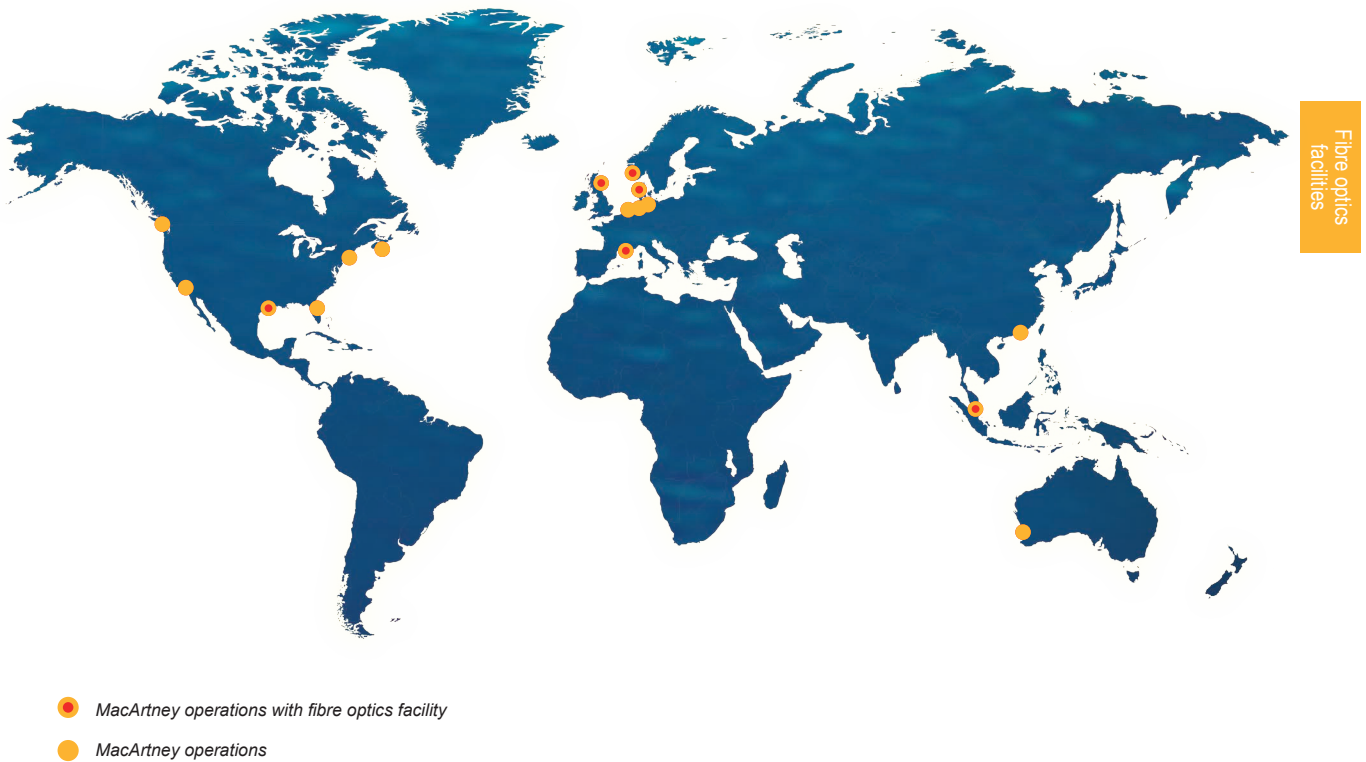

Advanced equipment and off-site service

The MacArtney fibre optics workshops employ only the best materials and components supported by the latest and most efficient equipment and technologies.

Much of our equipment is battery powered allowing our technicians to perform on-site service jobs at the customer location of choice.

Finally, the MacArtney fibre optics workshops are supported by an extensive stock of optical cables to ensure rapid turnaround and delivery of all customer requirements.
